

THE HALITE |

Halite is inspired by the crystallisation process within natural salt pans, where evaporating water reveals intricate mineral formations, organic textures and shifting colours. Its organic shape reflects a single halite crystal, while layered textures and mineral-inspired tones of chalk white, blush pink, oxidised green, deep blue, warm bronze and rich teal capture the evolving beauty of salt deposits. Rather than replicating the landscape, the rug interprets a single moment where fluidity transforms into form, bringing nature's quiet beauty into the built environment.
