

BEYOND THE FRAME

An entrance door is one of the most important design choices within a space. It creates the first impression, establishes a sense of anticipation and offers a subtle glimpse of what may exist beyond it.

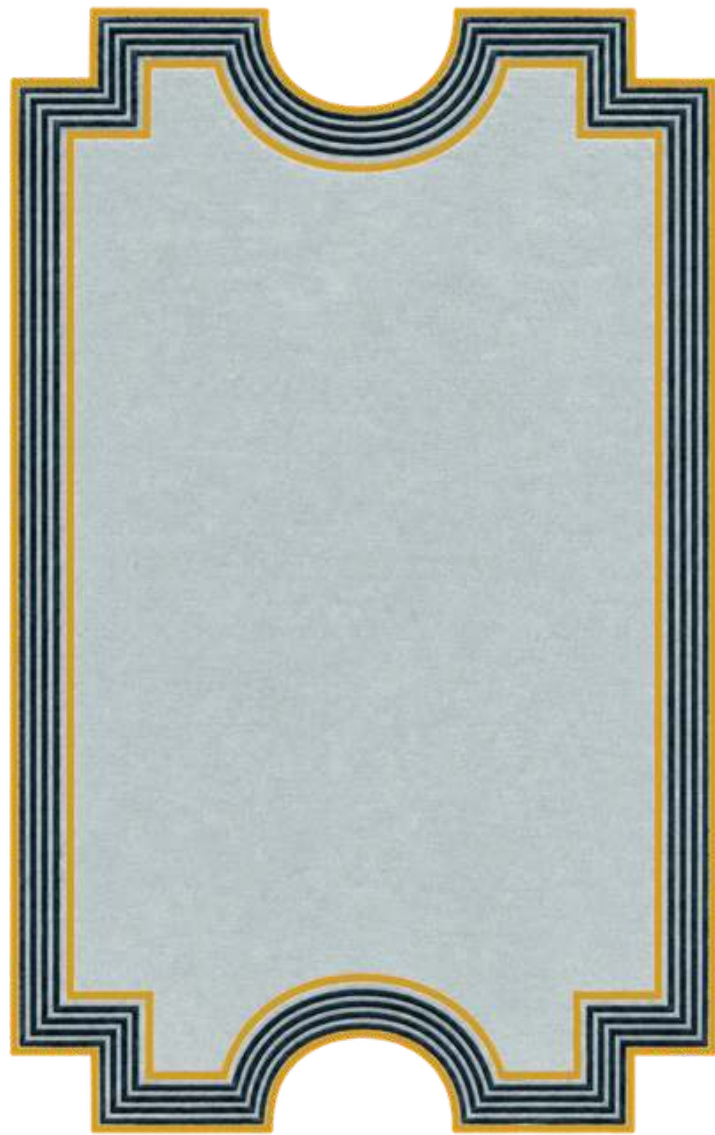

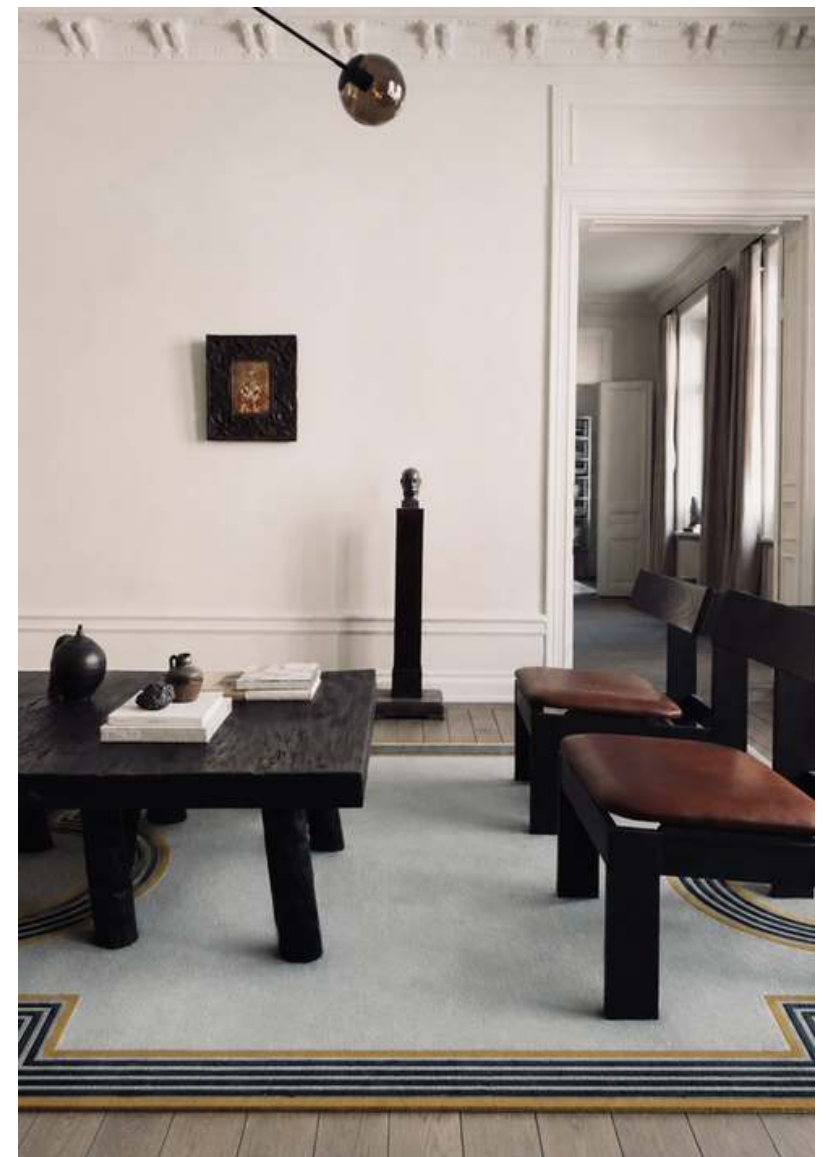

"Beyond the Frame" explores this moment of transition by translating the architectural language of traditional doorframes into a contemporary rug. The doorframe is removed from its familiar vertical position and reinterpreted horizontally across the floor, transforming the rug into a threshold that guests physically cross as they enter the hotel.
